University #1, I. Chavchavadze Avenue, Tbilisi 0179, Georgia

Imereti has diverse and beautiful landscapes, with almost all of the landscape girders present in the alpine meadows ranging from wet soupboats. The region is particularly rich with natural monuments, most of which are known for the narrow circle of scientists.

The Chiatura municipality is particularly noteworthy, with a great variety of nature. The main source of income is manganese production, but the level of unemployment and morbidity in the population is very high, but there are a lot of monuments that make it suitable for tourists as attractive and interesting objects.

It is noteworthy that some important objects do not even have the status of nature, but their entry into tourist routes will significantly enhance the potential of our country's tourism and make it more attractive to local or foreign visitors. Involvement of these nature wonders in touristic routes will make traveling in Georgia much more attractive as for foreigners as well as for our population.

My article particularly emphasises on inorganic monuments of nature of the Chiatura municipality, most of which are concentrated on the caves, as we know about 110 caves in Chiatura, many of which deserve the status of the natural monument.
