

Summary

The main reason of the research is Landscape Planning for Sustainable Tourism development (Example of the Bolnisi municipality). Targets is associated with the following tasks:

1. Determine basics of the Bolnisi municipality landscape planning on the level of landscape plan.
2. Emphasize existing and promising types of tourism, which introduction will be possible and

profitable for the socio-economic development of Bolnisi.

3. Examine geographic and ecologic peculiarities of Bolnisi.
4. Identify important natural and anthropogenic conflicts from landscape planning. And determine sectoral and integrated planning targets.

During the survey will be used methodology of landscape planning, which reason is development of recommendations for sector. According to this result will be hold zonation of areas, in reason of its conservation, development and improvement. Research methodology belongs to study and consideration of local public opinions. It will be realized with specially designed sociological questionnaire.

Project will represent several new features. The most important of them:

1. There will be created first-time geographic information system databases of Bolnisi tourism potential.

2. The first time will be used not only landscape planning methodology for only sustainable development of tourism in the Bolnisi region, but also will improve environmental situations.

3. The first time will be determined geographic types of tourism potential of Bolnisi and will be planed the travel routes.

Implementation of the project will contribute to improve landscape planning methodology, will improve tourism in the region of Bolnisi too and will develop different directions of agriculture.
